SUMMARY

Senior Front-End Engineer with **6+ years of experience** architecting scalable, high-performance enterprise applications for Fortune 500 clients. Demonstrated technical leadership in building intuitive, accessible, and responsive user interfaces using **Angular** and **React** and utilizing **Node.js** for Server-Side Rendering and API integration to optimize platforms.

TECHNICAL SKILLS

- **Frontend:** Angular, React.js, Next.js, SAP Storefront (**Spartacus**), React Native, TypeScript, JavaScript, HTML5, CSS3
- **State & Performance:** RxJS, NgRx, Redux, Context API, Lazy Loading, Server-Side Rendering (SSR), Micro-Frontends
- **Backend & Integration:** C# (.NET Core), Node.js, Express.js, GraphQL, RESTful APIs, Webpack, Vite, Kafka, NGINX
- **AI & Data Engineering:** OpenAI Integration, Prompt Engineering, RAG, Python (Pandas, NumPy, Scikit-learn, TensorFlow)
- **Testing & DevOps:** Jasmine, Karma, Docker, CI/CD (GitHub Actions, Azure DevOps), AWS (S3, EC2)
- **Tools & Methodologies:** Git, Jira, Figma, Agile/Scrum, WCAG 2.2 (Accessibility), SEO Optimization, SonarLint

WORK EXPERIENCE

Keysha Mind Inc.

May 2025 - August 2025

Software Engineer Intern

- Architected and deployed a full-stack intelligent scheduling system using **React.js**, **Next.js** and **Node.js**.
- Integrated **OpenAI-compatible APIs** to parse user intent and automate meeting agendas, reducing scheduling friction.
- Refactored legacy codebase to **React**/Server-Side Rendering, improving First Input Delay by 30% through modernization.

Cognizant Technology Solutions

July 2021 - April 2023

Senior Software Engineer

Clients: Sanofi, Johnson & Johnson

- Architected and delivered B2B e-commerce platforms using **Angular** and **SAP Storefront (Spartacus)**.
- Engineered the frontend for *J&J Customer Connect*, a high-traffic B2B e-commerce portal serving 20,000+ monthly users.
- Configured **CMS components** and customized **OOTB** features to implement a responsive user experience across all devices.
- Spearheaded the **zero-to-one development** of critical cart, checkout, and order modules for *VaccineShope* portal, guiding a squad of 4 developers to deliver robust, full-cycle solutions.
- Architected complex global state management using **NgRx** and **RxJS** to handle B2B cart and checkout flows, ensuring data consistency across sessions and reducing redundant API calls by 40%.
- Achieved a 25% reduction in page load time by implementing lazy loading, image optimization, and change detection strategies.
- Integrated and maintained multiple **payment gateways**, ensuring compliance and reliable processing for high-value orders.
- Pioneered the adoption of **Headless Commerce** and implemented a scalable **internationalization** architecture.
- **Mentored** 3 new hires and conducted **~50 technical interviews**, scaling the engineering team and establishing coding standards.
- Planned **Agile** sprints and managed **Jira** backlogs, coordinating API contracts with SAP Hybris teams for seamless integration.

Accenture

November 2017 - June 2021

Software Engineer

RIAD – Risk, Issues, Action, and Decision

- Architected and developed interactive **Angular** SPAs for **Risk, Issues, Actions, and Decisions**, later unifying them into a single platform using a **micro-frontend** architecture.
- Developed and integrated backend business logic and **REST APIs** in **C#/.NET Core**, persisted data in **MongoDB** and **SQL Server**, and delivered releases via automated **CI/CD** pipelines.
- Built interactive dashboards and data visualizations using **D3.js charts** to highlight risk trends and status metrics.
- Created and maintained **Jasmine/Karma unit tests** for critical UI flows to prevent regressions and improve release confidence.

My-Wizard Resource Management

- Built onboarding/offboarding and resource allocation workflows using the **MERN stack (MongoDB, Express.js, React, Node.js)** with responsive, form-driven UI.
- Developed **Node.js/Express REST APIs** and designed **MongoDB schemas with indexing** for employee lifecycle workflows, validations, status tracking, and improved query performance.
- Built reusable **React** components and state management for multi-step onboarding forms, improving maintainability.
- Integrated frontend and backend with secure role-based **authentication/authorization** and consistent error handling.
- Led re-platforming of the Mobilization Management application from SharePoint to ASP.NET MVC.

EDUCATION

San Jose State University	M.S. in Computer Science & Engineering	3.8/4	Jan 2024 - Dec 2025
Anna University	B.E. in Electronics & Communications Engineering	8.19/10	Aug 2013 - May 2017

ACADEMIC PROJECTS

- **Modality-Aware Twin Graphs: Microservice Anomaly Detection and Root Cause Analysis via Mixture of Experts:** Developed MSTGAD, a multi-modal graph neural network for microservice root cause analysis using Mixture-of-Experts architecture to process metrics, traces, and logs, achieving 95% accuracy in identifying fault sources within top-5 predictions.
- **Distributed Blog Design:** Designed a fault-tolerant blog system using ZooKeeper, Kafka & partitioned storage with replication for dynamic failover. Implemented range-based sharding for optimized data distribution, and documented query tuning.
- **AI-Powered Content Creator:** Built an AI platform with ChatGPT & DALL·E for automated social posts, using React with SEO & personalization to boost engagement.
